

NextLight Starter Guide

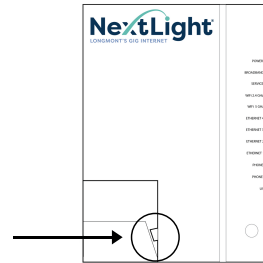

844G-1 Indoor Optical Network Terminal (ONT)

1. Locate the **white NextLight wall plate** and carefully lift the hatch from the bottom to expose the fiber port connections. Locate the nearest power outlet to the wall plate.

2. Slide the back panel off the ONT to expose the fiber port. Carefully remove the cap found on the fiber port of your ONT.

3. Carefully remove the plugs found on the ends of the yellow-and-green fiber cable, ensuring not to touch the end of the cable once the plugs have been removed. Making sure the notch on the fiber cable is aligned with the slot on the fiber port, plug the yellow-and-green fiber cable into the fiber port on the ONT and reattach the cover.

4. Plug the other end of the yellow-and-green fiber cable already attached to your ONT into the white NextLight wall plate; making sure the notch on the yellow-and-green fiber cable is aligned with the slot on the NextLight wall plate.

5. About 5 minutes after powering the unit on, the Power, Boadband, Service, and Wifi lights should be lit green. *Default wireless information can be found on the default settings sticker located on the side of the ONT. SSID is the wireless network name, WPA-Key is the wireless network password.*
